

DIH-4000V Low Bitrate Multi-Screen Transcoder

The DIH-4000V low bitrate H.264 Real Time Transcoder is specially designed for IPTV system, especially for those IPTV systems over unmanaged network architectures in which the bandwidth are normally limited. Adopting the powerful chip sets and high efficient SD/HD decode/compression algorithm, the inputted programs (Video + Audio) can be transcoded (re-compressed) into relative low bit rate (
